

PROJECT REPORT

Title

Project Management Tool

Submitted By

Name: Mitushi Jain

College: Graphic Era Deemed To be university

Internship: CodeAlpha Full Stack Development Internship

Submission Date: _____

1. Introduction

The Project Management Tool is a web-based application designed to help users organize, manage, and track project tasks efficiently. The application provides a simple Kanban-style interface where tasks can be created, updated, and moved through different stages of completion. This project demonstrates the implementation of frontend web development concepts using HTML, CSS, and JavaScript.

The system allows users to create tasks, monitor their progress, and manage workflow through three stages: To Do, In Progress, and Done. The tool improves productivity by providing a structured method of task management.

2. Objectives

The main objectives of this project are:

- To create a simple project management application.
 - To provide task tracking functionality.
 - To implement task status management.
 - To create a responsive and user-friendly interface.
 - To demonstrate JavaScript DOM manipulation and event handling.
-

3. Technologies Used

Frontend

- HTML5

- CSS3
- JavaScript

Development Tools

- Visual Studio Code
 - Google Chrome Browser
-

4. System Features

Task Creation

Users can add new tasks using the task input field.

Task Progress Tracking

Tasks can be moved between different stages:

- To Do
- In Progress
- Done

Responsive Design

The application adapts to different screen sizes and devices.

User-Friendly Interface

Simple and clean design for better usability.

5. System Architecture

The application consists of three main components:

HTML

Provides the structure of the application.

CSS

Provides styling, layout, and responsive design.

JavaScript

Handles task creation, task movement, and dynamic updates.

6. Working Procedure

1. The user enters a task in the input field.
 2. Clicking the "Add Task" button creates a new task card.
 3. The task initially appears in the "To Do" section.
 4. Clicking the "Move" button transfers the task to the "In Progress" section.
 5. Clicking the "Complete" button moves the task to the "Done" section.
 6. The interface updates automatically without refreshing the page.
-

7. Implementation

The application uses JavaScript functions to:

- Create task elements dynamically.
- Append tasks to different sections.
- Update task status.
- Manage user interactions.

CSS Flexbox is used to create the Kanban board layout and ensure responsiveness.

8. Advantages

- Easy task management.
 - Improves productivity.
 - Simple user interface.
 - Responsive design.
 - Lightweight and fast.
-

9. Limitations

- No database connectivity.
- Data is not stored permanently.
- No user authentication.
- No real-time collaboration features.

10. Future Enhancements

- User Login and Registration.
- Database Integration.
- Task Assignment to Users.
- Due Dates and Notifications.
- Real-Time Collaboration.
- File Attachments.
- Project Analytics Dashboard.

11. Conclusion

The Project Management Tool successfully demonstrates the core concepts of web development and task management. The application allows users to create, track, and complete tasks through an interactive interface. This project helped in understanding HTML, CSS, JavaScript, DOM manipulation, event handling, and responsive web design. The developed system can serve as a foundation for more advanced project management applications in the future.
