

Project Title: Simple E-Commerce Store**Objective:**

To develop a basic e-commerce website where users can browse products, add items to a shopping cart, view cart contents, and place orders.

Technologies Used:

- HTML
- CSS
- JavaScript

Features Implemented:

- Product listing page
- Shopping cart functionality
- Dynamic cart count
- Total price calculation
- Order placement system
- Responsive user interface

Outcome:

The project successfully demonstrates the core functionalities of an e-commerce platform, including product management, cart operations, and order processing through a user-friendly interface.
